# EZYSTUD®

## ADJUSTABLE NOGGIN - By PowAFix

### QUICK & EASY, SAVING YOU TIME & MONEY!

### What is Ezystud® used for?

Ezystud®, the adjustable noggin is your best alternative to the common lump of timber. Ezystud® is used for mounting pipework within a stud wall in between two vertical studs.

### Why Choose Ezystud® ?

- ✓ Comes 330mm wide, opens out to 450mm wide and extends right out to 600mm wide stud
- ✓ Everything you need is included:
  - Self-Drilling Screws for steel stud
  - Nails for timber
  - Plastic Isolating Strip
- ✓ You don't need to find a tape measure to ensure the stud is accurate
- ✓ Ezystud® will not bow the stud, prevents rippling effects in walls
- ✓ Looks top quality & professional
- ✓ Seriously fast to install – TIME IS MONEY!

### What is an isolating strip?

The Ezystud® has isolating strips on both sections when mounting fittings e.g. No.19BPs, you generally cannot mount directly onto steel because steel and brass are dissimilar metals. If they do make contact it can cause corrosion. With the isolating strip it will prevent any corrosion occurring.
